Toxic area maintenance workers

| PBCDF WEEKLY TOTALS | AMOUNT |
|------------------------|--------|
| Nerve Agent GB Rockets | 2,070 |
| Nerve Agent GB Pounds* | 23,737 |

| PBCDF PROJECT TOTALS | AMOUNT |
|---|---------|
| Nerve Agent GB Rockets | 38,659 |
| Percentage of Nerve Agent GB Rockets | 42.8% |
| Nerve Agent GB Pounds* | 399,982 |
| Percentage of Total Chemical Agent Tons | 5.2% |

* Includes chemical agent destroyed in both the Deactivation Furnace and Liquid Incinerator Systems.

In order to accomplish our goal of ensuring maximum protection for our workers, our community and our environment, PBCDF uses two major air-monitoring systems – the Automatic Continuous Air Monitoring System (ACAMS) and the Depot Area Air Monitoring System (DAAMS). ACAMS are used to quickly sample the air in a particular area and provide an indication of the possibility of chemical agents and their concentrations. DAAMS are used to detect very low levels of chemical agent over extended periods of time and to verify the results of the ACAMS. These two monitoring systems have served a vital role in ensuring our workers, our community and our environment have remained safe throughout the disposal process.

PBCDF Milestone Dates:

- PBA Chemical Weapons Stockpile Storage began in 1945
- Construction began in 1999
- Construction complete in 2002
- Testing and Training complete in 2005
- Disposal Operations began in March 2005
